Overview

As an exception the University of Missouri's federally-negotiated F&A cost rate applicable to research, a "clinical trial," as defined below, is subject to a rate of 26 percent. This reduced rate is consistent with clinical trial F&A rates employed by other research universities. The rate applies to total direct cost (TDC); no budgeted item is excluded from the base to which the F&A rate is applied.

When a commercial or industry firm requires rights in data to the exclusion of the University and/or claims ownership rights to intellectual property developed by the University under a clinical trial project, F&A costs must be charged not less than the clinical trials rate plus five (5) percent.

Definition of clinical trial for the purpose of application of 26% (or 31%) F&A rate: The controlled, clinical testing in human or vertebrate animal subjects of investigational new drugs, devices, treatments, or diagnostics, or comparisons of approved drugs, devices, treatments, or diagnostics, to assess their safety, efficacy, benefits, costs, adverse reactions, and/or outcomes. Such studies may be conducted under an industry-developed protocol or an investigator-developed protocol.

These studies are most often conducted in conjunction with obtaining new drug or device approval from the U.S. Food and Drug Administration, under Phase I, II, III, or IV, although they can be designed with the sole purpose of collecting and analyzing data about approved drugs or devices or behavioral interventions in order to contribute to medical knowledge about the prevention or treatment of a disease or medical condition.

Financial support for a clinical trial must be provided by a private entity, including pharmaceutical companies, interest groups, or charities. The University's federally-negotiated rates apply to all federally-funded clinical trials, whether the funds are awarded directly from the sponsor or flow through an intermediary sponsor.

In all cases, the study must include the prospective enrollment of human or vertebrate animal subjects and the controlled testing of a drug, device, treatment, or diagnostic under an approved protocol. Retrospective chart reviews, analysis of existing medical data and records, laboratory research, and federally funded projects are not categorized as clinical trials for purposes of applying the approved clinical trial F&A rate.

Any deviation from this definition in determining the applicable rate must be approved by the Vice Chancellor for Research, Graduate Studies and Economic Development.
