Exempt Review

Effective Date: January 21, 2019
Original Approval Date: January 21, 2019
Revision Date: 

Approved By: Michele Kennett, JD, MSN, LLM
Associate Vice Chancellor for Research

1.0 Purpose

The policy describes the research that does not require IRB review and outlines the process for determinations of exemption.

2.0 Scope

The SOP applies to all exempt human subject research falling under the purview of the University of Missouri Institutional Review Board.

3.0 Policy/Procedure

In accordance with federal regulations and institutional requirements, any undertaking in which any MU and/or HSTMVH faculty, staff, or students investigate and/or collect data on human participants for research purposes is subject to the MU HRPP and review by the Institutional Review Board (IRB) regardless of the funding source or exempt status.

Transition of Exempt Research to the Revised Common Rule

Studies determined to be exempt prior to January 21, 2019 will not be transitioned to the revised exempt categories/review process UNLESS the research is federally funded. Federally funded, exempt research will receive a revised category of exemption prior to January 21, 2019. For those studies requiring limited IRB review, the review will be conducted at that time. Additional information regarding limited IRB review is included below.
The MU IRB has determined the revised common rule exempt categories will be utilized for all studies, regardless of funding, determined to be exempt after January 21, 2019 as they allow more flexibility than the pre-2018 categories (see pre-2018 categories below).

**Exempt Categories of Research**

Research activities in which the only involvement of human subjects will be in one or more of the following categories are exempt under applicable regulations and guidelines 45 CFR 46.104 and 21 CFR 56.104, 105. Prisoners can only be involved if the research is aimed at involving a broader subject population that only incidentally includes prisoners. Research cannot be FDA regulated under #1-5.

**Category 1:**

Research conducted in established or commonly accepted educational settings that specifically involve normal educational practices that are not likely to adversely impact students' opportunity to learn required educational content or the assessment of educators who provide instruction.

This includes most research on regular and special education instructional strategies, and research on the effectiveness of or the comparison among instructional techniques, curricula, or classroom management methods.

Clarification: The research can only be conducted in established or commonly accepted educational settings. This includes, but is not limited to, schools and colleges. It may include other sites where educational activities regularly occur. Children may fall under this category.

**Category 2:**

Research that only includes interactions involving educational tests (cognitive, diagnostic, aptitude, achievement), survey procedures, interview procedures, or observation of public behavior (including visual or auditory recording) IF at least ONE of the following criteria is met:

(i) The information obtained is recorded by the investigator in such a manner that the identity of the human subjects cannot readily be ascertained, directly or through identifiers linked to the subjects; OR

(ii) Any disclosure of the human subjects' responses outside the research would not reasonably place the subjects at risk of criminal or civil liability or be damaging to the subjects' financial standing, employability, educational advancement, or reputation; OR

(iii) The information obtained is recorded by the investigator in such a manner that the identity of the human subjects can readily be ascertained, directly or through identifiers linked to the subjects. The study cannot involve children under this option.
The IRB must conduct limited IRB review under this option.

Clarifications: Children can only be involved if their participation is limited to (1) educational tests or (2) observations of public behavior when the investigator(s) do not participate in the activities being observed. Children cannot fall under item (iii).

Educational Tests: These do not have to be administered in an educational setting like category 1.

Survey & Interview Procedures: This is not meant to include activities that will influence or change a participant's social, behavioral, or educational outcomes or abilities. This activity should be limited to completing a survey or an interview/focus group.

Observation of Public Behavior: To be considered public, the subjects would not have an expectation of privacy. It would reasonably be expected that observations or recordings could take place.

VA Research: If any disclosure of the participants' responses outside the research could reasonably place the participants at risk of loss of insurability, information obtained must recorded in such a manner that human participants cannot be identified, directly or through identifiers linked to the participants.

Category 3:

Research involving *BENIGN behavioral interventions in conjunction with the collection of information from an ADULT subject through verbal or written responses (including data entry) or audiovisual recording if the subject prospectively agrees to the intervention and information collection AND at least ONE of the following criteria is met:

(i) The information obtained is recorded by the investigator in such a manner that the identity of the human subjects cannot readily be ascertained, directly or through identifiers linked to the subjects; OR

(ii) Any disclosure of the human subjects' responses outside the research would not reasonably place the subjects at risk of criminal or civil liability or be damaging to the subjects' financial standing, employability, educational advancement, or reputation; OR

(iii) The information obtained is recorded by the investigator in such a manner that the identity of the human subjects can readily be ascertained, directly or through identifiers linked to subjects. The IRB must conduct limited IRB review under this option.

* Benign behavioral interventions are brief in duration, harmless, painless, not physically invasive, not likely to have a significant adverse lasting impact on the subjects, and the investigator has no reason to think the subjects will find the interventions offensive or embarrassing. Examples could include playing an online
game, solving puzzles under noise conditions, or having them decide how to allocate a nominal amount of received cash between themselves and someone else.

If the study involves deceiving the subjects regarding the nature or purposes of the research, this exemption does not apply UNLESS the subject authorizes the deception through a prospective agreement to participate in research in circumstances in which the subject is informed that he or she will be unaware of or misled regarding the nature or purposes of the research.

Category 4:

Secondary research for which consent is not required. Secondary research uses of identifiable private information or identifiable biospecimens IF at least ONE of the following criteria is met:

(i) The identifiable private information or identifiable biospecimens are publicly available;

(ii) Information, which may include information about biospecimens, is recorded by the investigator in such a manner that the identity of the human subjects cannot readily be ascertained directly or through identifiers linked to the subjects, and the investigator does not contact the subjects, and the investigator will not re-identify subjects;

(iii) The research involves only information collection and analysis, that either:

(a) involves the investigator's use of identifiable health information when that use is regulated under HIPAA for the purposes of "health care operations," or "research," or "public health activities and purposes" as defined by HIPAA; OR

(b) involves research conducted by, or on behalf of, a Federal department or agency using government-generated or government-collected information obtained for nonresearch activities, if the research generates identifiable private information that is or will be maintained on information technology that is subject to and in compliance with section 208(b) of the E-Government Act of 2002, 44 U.S.C. 3501 or Privacy Act of 1974, 5 U.S.C 552a.

Category 5:

Research and demonstration projects that are conducted or supported by a Federal department or agency, or otherwise subject to the approval of federal department or agency heads (or the approval of the heads of bureaus or other subordinate agencies that have been delegated authority to conduct the research and demonstration projects).

The research is designed to study, evaluate, improve, or otherwise examine public benefit or service programs, including procedures for obtaining benefits or services under those programs, possible changes in or alternatives to those programs or
procedures, or possible changes in methods or levels of payment for benefits or services under those programs.

The research must be conducted pursuant to specific statutory authority of the US federal government. There is no statutory requirement that an IRB review the research. The research does not involve significant physical invasions or intrusions upon the privacy of participants.

Category 6:
Taste and food quality evaluation and consumer acceptance studies: (i) if wholesome foods without additives are consumed; or (ii) if a food is consumed that contains a food ingredient at or below the level and for a use found to be safe, or agricultural chemical or environmental contaminant at or below the level found to be safe, by the Food and Drug Administration or approved by the Environmental Protection Agency or the Food Safety and Inspection Service of the U.S. Department of Agriculture.

Categories 7 and 8:
The MU HRPP/IRB decided not to allow the use of categories 7 and 8 of the revised common rule or allow broad consent at this time.

Application Submission and Review Process

The investigators must submit the IRB Application for exempt review. The IRB staff will review the application to determine if it meets the criteria. The IRB staff has the authority to represent the institution, and will have no direct involvement in the activity he or she is examining. The person making the decision will be familiar with laws, regulations, codes, and guidance governing research, organizational policies, and the nature of the research to make sound judgments. If the application meets the criteria for exemption, the IRB staff member will document the category or categories of exemption utilizing the exempt reviewer checklist. The exempt determination will also be included in the IRB approval letter.

Exempt research will be evaluated to determine if it fulfills MU’s ethical standards:

1. All investigators must have up-to-date CITI basic human subject research training.
2. The research must involve no more than minimal risk.
3. The must be equitable subject selection
4. If there is recording of identifiable information, there are adequate provisions to maintain the confidentiality of the data
5. If there are interactions with participants, investigators will confirm within the IRB application that subjects and/or their guardians will be informed of the following utilizing a consent process:
   a. A statement that the activity involves research
   b. A description of the procedures
   c. That statement that participation is voluntary
d. The name and contact information for the researcher
6. There are adequate provisions to maintain the privacy interests of participants
7. For identifiable chart or biospecimen reviews, a HIPAA waiver was approved by
   the IRB Chair or designated board member.

Exempt Projects in Other Countries
Laws and regulations in some countries do not allow exemptions, and in that case even
though the research may be covered by DHHS regulations, exemptions would not be
allowed.

Limited IRB Review
If the study is federally funded and falls under category #2(iii) and/or #3(iii), the Chair or
IRB member designee (experienced IRB member) performs a limited IRB review to
determine if there are adequate provisions to protect the privacy of subjects and to
maintain the confidentiality of data. This will be documented utilizing an IRB reviewer
checklist in eCompliance.

1. The IRB reviewer may not disapprove the research under limited IRB review.
   Full board review will be required if disapproval is recommended.
2. The IRB or institution retains the authority to suspend or terminate approval of
   research approved under limited IRB review.

Continuing Review
On an annual basis, the investigator must submit an Annual Exempt Form to keep the
study open if so desired. When the study is complete, an Annual Exempt Form or the
Completion Report must be submitted to close the study.

Exempt Amendment Review
An Exempt Amendment Form must be submitted to the IRB for review and approval
prior to initiating any changes to the exempt study. The IRB will confirm the study still
meets the exempt criteria. For federally funded studies, if changes are proposed regarding
the provisions to protect the privacy of subjects or to maintain the confidentiality of the
data, limited IRB review will be conducted.

Non-Compliance
The investigator must report non-compliance within 5 business days on an exempt study.
For exempt research, non-compliance is typically reviewed administratively and
education is provided. The IRB may request the Event Report to be submitted or simply
document the issue and resolution in eCompliance.
   a. If the issue may have resulted in serious or continuing non-compliance, the issue
      will follow the Non-Compliance SOP.
   b. If the issue may have resulted in an unanticipated problem, the issue will follow
      the Unanticipated Problems SOP.
   c. If the issue may result in suspension or termination, the issue will follow the
      Suspension or Termination SOP.
Research Activities Determined not to be Exempt
If the application does not meet criteria for exemption, the Principal Investigator will be notified. The notification will indicate either that the project did not meet requirements for human subjects research, what modifications are necessary to allow the research to be exempt, or to request the investigator complete the expedited and full board sections of the application.

Project Approval
The Principal Investigator will be notified in writing of the approval of the project, including projects utilizing limited IRB review. The IRB determination letter can be found in eCompliance attached files.

The project number, title, Principal Investigator’s name, and other study information will be included in the board meeting packet. See Board Meeting Procedures and Minutes SOP for more information.

Exempt VA studies will require VA R&D approval, and review by the VA Privacy Officer and Information Security Officer. Please refer to the VA Hospital Research Special Considerations SOP for additional requirements for VA research.

Reference: Pre-2018 Exempt Categories:

Category 1:
Research conducted in established or commonly accepted educational settings, involving normal educational practices, such as (i) research on regular and special education instructional strategies, or (ii) research on the effectiveness of or the comparison among instructional techniques, curricula, or classroom management methods.

Category 2:
Research involving the use of educational tests (cognitive, diagnostic, aptitude, achievement), survey procedures, interview procedures, or observation of public behavior, unless (i) information obtained is recorded in such a manner that human subjects can be identified, directly, or through identifiers linked to the subjects; and (ii) any disclosure of the human subjects' responses outside the research could reasonably place the subjects at risk of criminal or civil liability or be damaging to the subjects' financial standing, employability, or reputation. (For VA research, VA regulations require loss of insurability to also be considered.)

Note: This category of exemption cannot be used for research involving survey or interview procedures or observation of public behavior with children, except for research involving observations of public behavior when the investigator(s) do not participate in the activities being observed.
Category 3:
Research involving the use of educational tests (cognitive, diagnostic, aptitude, achievement), survey procedures, interview procedures, or observation of public behavior that is not exempt under category 2, if (i) The human subjects are elected or appointed public officials or candidates for public office; or (ii) Federal statute(s) require(s) without exception that the confidentiality of the personally identifiable information will be maintained throughout the research and thereafter.

Category 4:
Research involving the collection or study of existing data, documents, records, pathological specimens, or diagnostic specimens, if these sources are publicly available or if the information is recorded by the Investigator in such a manner that subjects cannot be identified, directly or through identifiers linked to the subjects.

Category 5:
Research and demonstration projects which are conducted by or subject to the approval of Department or Agency heads, and which are designed to study, evaluate, or otherwise examine (i) Public benefit or service programs; (ii) Procedures for obtaining benefits or services under those programs; (iii) Possible changes in or alternatives to those programs or procedures; or (iv) Possible changes in methods or levels of payment for benefits or services under those programs.

Note: The program under study has to deliver a public benefit (e.g., financial or medical benefits as provided under the Social Security Act) or service (e.g., social, supportive, or nutrition services provided under the Older Americans Act), the project must be conducted pursuant to specific federal statutory authority, there can be no statutory requirement that an IRB review the project, the project cannot involve significant physical invasions or intrusions upon the privacy of participants, and OHRP has to concur that this exemption category is appropriate for the research.

Category 6:
Taste and food quality evaluation and consumer acceptance studies (i) If wholesome foods without additives are consumed, or (ii) If a food is consumed that contains a food ingredient at or below the level and for a use found to be safe, or agricultural chemical or environmental contaminant at or below the level found to be safe, by the FDA or approved by the Environmental Protection Agency or the Food Safety and Inspection Service of the U.S. Department of Agriculture.
